FINCIBEC GROUP AND ITS ENGAGEMENT TO REDUCE CO₂ EMISSIONS

The will by Fincibec Group to pursue a model of industrial eco-sustainability is also witnessed by its engagement to reduce its CO₂ emissions by financing several projects, such as:

- Panama Rainforest Project
- Andhyodaya Biogas Offset Project
- Minnesota Afforestation Offset Project
- Rocky Reach Renewable Energy Offset Project
- Serraria Egidio Biomass Offset Project

To strengthen and communicate in the best way its engagement in reducing CO₂ emission, Fincibec has decided to embark on the certification procedure for its productive process together with Bureau Veritas, with the target of identifying precisely its own environmental impact as for “carbon foot-print” and later balancing it, for the production of a few product collections, by financing the above mentioned projects.

Therefore, Fincibec Group achieves not only the result of reducing the environmental impact of its productive process but also of supporting economies and populations needing support. The local communities are indeed strongly involved in these projects that actually represent an opportunity to offer jobs and livelihood in depressed areas of our planet.

BUREAU VERITAS
Certification

Conformity Certificate

issued to:

FINCIBEC S.p.A.

Via Valle d'Aosta, 47 – 41049 Sassuolo (MO)

Bureau Veritas certifies that the carbon dioxide (CO₂) emissions from production process on the following plants:
